This is well pounded down, and when the earth is sufficiently set the twig is withdrawn, leaving a hole which answers the purpose of a pipestem. Tobacco is placed in the excavation.

The Hawaiian natives habitually swallow the smoke, and a few whiffs are enough to produce intoxication. This drawback, however, has its compensating advantage, since the exhaustion of a single pipe is enough to produce wholesale inebriation, as it is passed from mouth to mouth.

The Kaffirs smoke dagha tobacco, a species of hemp, in a water pipe resembling the hookab.
